AI Product Manager, trained as an architect

Hello, I'm WENYUAN.

AI Product Manager, trained as an architect

I'm Wen Yuan Li (Alnt Med). Trained as an architect, now building AI products — I run a department agent platform at XTOOL and build my own. Architecture taught me to turn scattered needs into a stable system; AI product work is where that method meets real scenarios.

EDUCATION

2025 – Shenzhen University · M.Arch, architecture × AI — the pivot to AI product

2020–2025 Guangzhou University · B.Arch

EXPERIENCE

2026 XTOOL · AIPM intern · Co-work agent platform, zero to one (65 people across 4 departments, 80%+ completion)

2025 Puwei Tech · AI product intern (vertical RAG agents)

2025 UABB Bi-city Biennale · multimodal AIGC lead · sole student representative

2025 Architectural Journal (T1) · second author, AIGC spatial optimisation

AWARDS

Challenge Cup · Grand Prize TOP 1%

Lanqiao Cup, national software competition · National First Prize TOP 1%

Shenzhen–Tsinghua AI Agent Hackathon · 2nd runner-up TOP 3%

CUHK Enterprise Agent Hackathon · Runner-up TOP 5%

NCDA National Digital Design Award · First Prize

SKILLS

PRODUCT AI coding (Claude Code / Cursor) · prototyping (Figma / Axure / ClaudeDesign) · PRD

DATA SQL · Python · A/B testing · AI eval sets · Apify · Excel pivots

ORCHESTRATION Coze · n8n

MULTIMODAL Tripo 3D · ComfyUI · Jimeng · Midjourney · UE5

PEARS.

Browser extension · PRD distillation · Workflow agents

Hi, I'm Pears 🍏 — show me your work once, and I turn it into a workflow agent of your own.

PROJECT

01 Pears ■

02 Co-work

03 Yijian

04 Meco

05 UABB

06 Architecture

The Short Version

- **Interning at XTOOL**, I saw one dev team that could never keep up with the whole company's agent requests.
- I wanted to lower the bar from "describe your work to an AI" to "just do it once."
- I built a browser extension solo, zero to launch: it watches you work, distills the trace into an editable PRD, and has an AI coding agent build your own workflow agent.
- It took 2nd runner-up at the ADVENTURE-X hackathon and drew some of the most enterprise interest on site.

■ ADVENTURE-X Hackathon · 2nd runner-up

Agent platform · Feishu · RAG · ROI dashboard

The Short Version

- **At XTOOL**, the department's output was dragged down by repetitive work and processes that ran on human legs.
- My job was to turn that manual effort into agent workflows — and I was the only one on it.
- **I interviewed each team**, broke down their needs, and built the department's agent platform zero to one: seven production tools covering the content pipeline, iterated three generations on analytics.
- It now serves 65 people across 4 departments at an 80%+ completion rate; my own ROI dashboard shows \$1 in saves 0.39 work-hours.

SEVEN TOOLS, ONE MEMORY. ■

*Hi, I'm Co-work — the
department's agent
workbench: seven tools
sharing one memory, one
rulebook, one pool of data.*

Why

- Teams kept getting stuck in the same places: hunting for assets, drafting from scratch, chasing reviews — all repetitive.
- Point tools can't fix that: without shared memory and rules, every tool has to be re-taught. What was needed was a system, not a pile of tools.

The screenshot shows a pricing tool interface with a table titled "同类产品 20 个" (Similar products 20 items). The table lists 20 products with their names, prices, and other details. The interface includes tabs for "准备" (Preparation), "调研" (Research), "定价" (Pricing), and "新建" (New).

Key Contributions

- **Zero to one**, solo: research, requirement breakdown, product definition, build and operations in one pair of hands.
- Analytics showed a 52% drop-off at the hook stage; my read was that high-creativity content can't be nailed in one shot — so I merged the generation stages and shipped three candidates side by side, driving three generations of iteration.
- Built the ROI dashboard myself, turning "how much did we save" into an auditable number.

① Brief

② Trends

候选脚本	脚本时长	脚本内容	脚本效果
sign with gift	30s	手举激光雕刻保温杯, 突出定制礼物和开箱视觉冲击	浏览量: 1000, 点赞量: 50, 评论量: 10

sign with gift	30s	手举激光雕刻保温杯, 突出定制礼物和开箱视觉冲击	浏览量: 1000, 点赞量: 50, 评论量: 10

③ Three candidates

How It Works

- **Kick off:** colleagues file requests right inside Feishu, never leaving their daily tool.
- **Generate:** agents pull external data and the RAG knowledge base; high-creativity steps ship three candidates for a human to pick.
- **Return:** results flow back into Feishu, closing the loop; all seven tools share one memory, one rulebook, one pool of data.
- **Measure:** every step is instrumented — completion rate, time cost and hours saved land in the ROI dashboard.

06

Impact

- Sixty-five people across four departments at 80%+ completion — this never stopped at the demo stage; it is genuinely in use.
- Every \$1 in saves 0.39 work-hours, above the 2026 enterprise average of 0.2–0.3.

Yijian. ↗

Multi-agent · Four-layer consensus · Auditable verdicts

Hi, I'm Yijian — hand me a decision, and I orchestrate the viewpoints until disagreement converges into one auditable verdict.

PROJECT

01 Pears

02 Co-work

03 Yijian ■

04 Meco

05 UABB

06 Architecture

The Short Version

- Corporate decision meetings often devolve into position-taking; the real disagreements stay unspoken, and seniority settles the verdict.
- At CUHK's enterprise agent hackathon, I owned product and build, trying to give "reaching consensus" an actual structure.
- It orchestrates seven role perspectives and converges disagreement through four layers: strategic goals, factual evidence, stakeholders, and weighted accountability.
- We took runner-up; the output isn't one sentence but a consensus score, the conditions the decision must satisfy, and the disagreements still open.

Meco.

Mushroom butler · One process · Five boards

Hi, I'm Meco 🍄 — the mushroom butler Wenyan built for himself: a Mac app tying together a Feishu bot, a desktop window, a scheduler and his Obsidian vault, so his daily life runs itself.

PROJECT

01 Pears

02 Co-work

03 Yijian

04 Meco ■

05 UABB

06 Architecture

The Short Version

- At the busiest point of my job hunt, my life was scattered across Feishu, my notes and my calendar — moving information around ate almost an hour a day.
- I didn't want yet another app. I wanted one thread through them all — an AI that runs things for me, instead of me babysitting the tools.
- **So I built Meco alone**, as one Mac app: a Feishu bot, a desktop window, a scheduler and my Obsidian vault wired into one, plus 8 tools it can actually use.
- Now the morning brief and evening review run themselves. I open the window and today is already laid out.

UABB.

ComfyUI · Gemini · Tripo · 3D asset SOP

Hi, I'm the multimodal pipeline behind UABB — turning one-off exhibits into standard 3D assets is my day job.

PROJECT

01 Pears

02 Co-work

03 Yijian

04 Mecó

05 UABB ■

06 Architecture

The Short Version

- The biennale section held 50+ one-off exhibits; translating them by hand runs 30 days minimum.
- I owned multimodal AIGC and had to turn all of them into usable 3D assets before opening.
- I orchestrated Gemini and Tripo through ComfyUI into an automated translation pipeline, backed by a standardized 3D-asset SOP — with 120+ sketch and model iterations behind it.
- Processing fell from 30 days to 5; as the section's only student representative, I presented the pipeline on-site.

■ UABB 2025 · Sole student representative of the section
